RecommendedMetTriggers2015

Trigger Group	Single jet	Multi jets	MET	jet+MET	Sum Et	HT
period C2-C4, D3-D6, E, F, G, H, J	HLT_j260_320eta490 HLT_j360 HLT_j360_a10_lcw_sub_L1J100 (****) HLT_j360_a10r_L1J100 (***)(****) HLT_j360_a10_sub_L1J100 (****)	HLT_3j175 HLT_4j85 HLT_5j60 HLT_6j45	HLT_xe70_mht (**)	HLT_j80_xe80		HLT_ht850_L1J75 (*)

Note:

(*) HLT_ht850_L1J100 is the lowest unprescaled for the whole run, in run 271595 ($L > 1.5E33$) and run 276689; collecting roughly 2% more integrated luminosity.

(**) HLT_xe70_tc_lcw and HLT_xe70 were also unprescaled. Unprescaled variants of these triggers also exist with muon corrections, which may be preferable in certain contexts.

(***) HLT_j360_a10r_L1J100 had a bug in 2015, and is not recommended for usage

(****) Large-R jet primaries HLT_j360_a10_lcw_sub_L1J100, HLT_j360_a10r_L1J100 and HLT_j360_a10_sub_L1J100 have been removed from MC after a menu slimming. See a full list of removed chains in ATR-16556 [\[4\]](#).

Analyses using MET triggers should also check events that fire **HLT_noalg_L1J400** to see if any of these events were **not** fired by the met trigger in the analysis phase-space.

The menu evolution for the un-prescaled triggers can also be found at [LowestUnprescaledMET](#).

Triggers monitored in the express stream are listed on the [twiki](#)

During the 2015 data-taking, a variety of MET trigger algorithms was being tested. The most frequently used algorithm was the cell algorithm, with lowest unprescaled trigger of 70 GeV, known as **xe70**. Other algorithms under test included a topo-cluster-based algorithm, **xe70_tc_lcw** and two variations of that algorithm with pileup mitigation <https://cds.cern.ch/record/2140103/> [\[4\]](#). Analyses which compared the performance of this algorithm to the topo-cluster-based algorithm found that the topo-cluster based algorithm had a sharper efficiency-turn-on as a function of offline MET, therefore higher efficiency at the same rate.

Major updates:
